Color Balance and Luminosity (Quilting Arts episode 2310-3)

Based on Goethe: assigning numbers to indicate a color's strength

VALUES: Yellow - 9 Orange - 8 Red -6 Green - 6 Blue - 5 Violet - 3

IF Equal "area" amounts then the amount of color with the Higher Luminosity will dominate.

To "balance" luminosity then use ratio of values to be approximately equal.

To have a balance between yellow and violet you need 3X more violet than yellow (9/3=3).

To have a balance between red and blue you need 1.2X more of blue then red (6/5 =1.2)

Select 2 colors. Have equals amounts of each color

Select 2 colors. Balance the colors using luminosity values
